Communication

Media Converter

- RS-232 / RS-422 serial communication protocol is converted to Ethernet
- Choice of three operation modes to suit your specific needs

- **Replace a Serial Cable Connection [Transparent Mode]**

In this mode, data from connected devices is transferred as is, without any changes. You can replace serial cables with Ethernet without changing communication software settings. Up to 254 units can be installed on the same line.

- **Add a COM port on your PC - [Virtual COM Mode]**

In this mode, the unit is used as a COM port in a Windows® PC. Via Ethernet, you can operate a remote device as if it were right next to you. Access by socket communication is also supported.

- **N-to-N Packet Communication Using Dedicated Commands – [Modem Mode]**

This mode is used for creating communication programs and conducting packet communications using dedicated commands. You can conduct communications to multiple units (N-to-N) by appending packets with the device ID. 254 units can be installed on the same line.
